Katz	Lori	CA	95076	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Lori Katz
Katz	Jeffrey	CA	90210	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Dana Kegaries
Kegler	Isla	CA	90731	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Isla Kegler-Williams
Kegler	Susannah	CA	90731	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Deb Kelly
Kelmon	Jessica	CA	94597	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Jessica Kelmon
Kelso	Kerry C	AZ	85650	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, brian kessler
Kessler	Arlyne London	CA	94610	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Arlyne London Kessler

As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Barbara Kling
Kingett	Kathie	CA	90631	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. Klein	JoAnne	CA	93312	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, As a 78 year old native Californian, I remember very well stepping on chunks of oil deposits while at the beach. And he smell of many ocean species caught in those chunks rotting in the sun. These chunks appeared from time to time. But now with fracking and pipes no longer able to contain the raw product, the oil slicks, oil chunks, and dead and dying creatures of the shore and sea don't stand a chance. IT'S TIME TO SERIOUSLY PURSUE ALTERNATIVE ENERGY BEFORE THIS PLANET COLLAPSES FROM THE WEIGHT OF DEAD INHABITANTS. I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. WHAT IS IT GOING TO TAKE TO GET PROTECTION FOR OUR OCEANS? ARE YOU GOING TO WAIT UNTIL SEAL LIFE CEASES TO EXIST AND PEOPLE CANNOT ENJOY BEACHES AND/OR SWIM IN THE WATERS? As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Konstanze Klemisch

Kliche	Diana	CA	90804	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Diana Kliche
Kline	Susan	CA	93010	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Camilla Knuhtsen

Ko	Caroline	CA	94550	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Caroline Ko

As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, cherise koopen

Kopinski	Jerry	CA	93446	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, joshua krasnoff

Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Leslie Krzeczowski
Kubota	Charleen	CA	94611	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Charleen Kubota

Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Georgia Labey
Labrador	Roxana	CA	94587	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Roxana Labrador

Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why we want you to prohibit it once and for all. Sincerely, Paul and Kathleen Lanctot
Lande	Robin	CA	90036	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Robin Lande

And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, J Lasahn
Lascano	Natacha	CA	95765	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Natacha Lascano

And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Renee Lazear
Lazos	Lauren	CA	93060	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Lauren Lazos

Lee	Trisha	CA	95501	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, NO FRACKING; Shut it all down, while concurrently implementing clean energy. You must prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. There is already poisoned water being recycled into agriculture, and this is going to cause more pollution of our water systems. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Why do we have to ask you to protect our state? Get out of bed with oil and get into bed with clean energy. Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Trisha Lee

More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Cynthia Leeder
Leeds	Vicki	CA	94956	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Vicki Leeds

leibert	teresa	CA	94558	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, My Grandsons are the sixth generation of San Francisco, California. My Grandfather was the Chief of the San Francisco Harbor Police. I, my ancestors and relatives have fished the Pacific since the 1800's. So I strongly request you to stop any and all actions that could pollute the sea life we love, and the fish that feeds our families. I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Tracy Lemmon
Lemongello	Donna	CA	95616	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Jeff Levicke
Levin	Adam	CA	91302	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Karen Liao
lieber	leo	CA	94520	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Bea Linn
Linton	Ashley	CA	92124	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Ashley Linton

More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Steve Loe
Loe	Peggy	CA	95954	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. Lonergan	CA	CA	94602	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am urging you most vehemently to PROHIBIT fracking off California's coast by oil companies. I was deeply disappointed to hear that your agency's produced a cursory-at-best draft analysis of offshore fracking! Fracking, a dirty, dangerous practice, has absolutely NO PLACE IN OUR OCEAN! You are well aware that offshore fracking increases the risk of earthquakes and oil spills, and the Refugio pipeline spill last year clearly demonstrated how much damage oil can do to our coasts - if the Deepwater Horizon oil rig spill did not! Refugio dumped more than 140,000 gallons of crude oil into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. Fracking chemicals that oil companies would resume dumping into our ocean (!) also pose a tremendous danger: studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are: ~known carcinogens; ~others damage immune and nervous systems; ~still others remain in the dubious category of "unknown" Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this illustrates that fracking ANYWHERE is hazardous to the health of our planet, no matter where it occurs, but ESPECIALLY in unpredictable, fragile marine environments! Offshore fracking is a huge gamble with our ocean's life-support systems; a gamble we must not take! I urge you to be remembered in California for having prohibited it once and for all! Sincerely, CA Lonergan

Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Olivia Lopez
Lopez	Nicole	CA	94044	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Margot Lowe
Lowell	Meryl	CA	96150	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Dana Ludwig
Luhring	Carl	CA	92081	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. Lukasiewicz	Judy	CA	95065	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to request that you prohibit all oil companies from fracking off the California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. The process of fracking for obsolete oil/gas is deadly. The product of dangerous and toxic fracking methods is also deadly. What does it take to put life and the survival of our shared earth before fantastical corporate monetary gain? You must know that offshore fracking forces toxic chemicals into our earth and aquifers, greatly increases the risk of earthquakes and toxic oil spills, and the methods are inefficient and highly polluting to the ocean and all the life it could have supported were fracking now allowed. The Refugio spill near Santa Barbara, CA last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of highly toxic crude oil were dumped into the Pacific Ocean, and hundreds to thousands of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are highly toxic to people and all wildlife like fish, sea otters, seals, sea plants, and less obvious, but very important microscopic sea life, etc. At the same time, many of these toxic chemicals are known carcinogens; others seriously damage immune and nervous systems. And still others remain in the dubious category of "unknown," which only adds to the concerns, since these are also most probably highly toxic and dangerous to all life forms. With all of this damning information regarding irrefutably toxic fracking practices, you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. This obvious fact clearly shows that fracking is extremely dangerous no matter where it occurs, including in our fragile and unpredictable marine environments. You're correct that fracking on land is increases toxic pollution, and resultant harm to life forms, etc. it also greatly adds to global climate change caused by obsolete oil/gas extraction and use. Clearly fracking on land must be discontinued as well as fracking in our oceans. Fracking is toxic and dangerous and all life forms must be protected from its impacts. Therefore, all fracking must be banned...immediately. There is no doubt of the lethal harm it poses to life. Offshore fracking is too big a gamble for oil companies to take with our ocean's life-support systems. Oil industry practices are deadly.--No matter how much money they make off their toxic trade...it's not worth it. That's why I request that you take a positive stand to prohibit fracking once and for all. Thank you. Sincerely, Judy Lukasiewicz
Lukaszewski	Aggie	CA	94610	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Renee Lynette
Lyon	Barbara	CA	93116	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Robin Mackey
Mackinnon	Bonnie Lynn	TX	78626	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. Makool	Rachel	CA	94116	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Rachel Makool
Maldague	LAURIE	CA	90403	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Phillip Manson
maples	Claude	CA	93225	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Claude maples

Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Frances Marsh
Marshall	Raymond	CA	95631	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Raymond Marshall
Marshall	Stephen	CA	94558	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, john martinez
Martinez	Amanda	CA	94546	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Amanda Martinez

And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, India Rose Matharu-Daley
mathews	james	CA	94403	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, james mathews
Mathison	Susan	CA	90039	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. Mayer	Karen	CA	95503	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. You know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." How, silly a reason: to propose to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. Such reasoning shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. WE depend on healthy food sources from the ocean. Offshore fracking is a huge gamble with our ocean's life-support systems; a gamble that cannot be rectified! I urge you to prohibit it once and for all. Sincerely, Karen Mayer
Mayosky	Denise	CA	95035	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Kevin Mazzocco
Mcahon	Terrill	CA	95062	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Terrill Mcahon

The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Roger and Judith McClure
McColl	Kelly	CA	93454	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Kelly McColl
McComas	Barney	CA	94709	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I urge you to prohibit oil companies from fracking off California's coast. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Michael McGee
McGhee	Laurie	CA	90604	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Laurie McGhee
McGovern	Heather	CA	95160	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Carol McMahon
McMahon	Carol	CA	95667	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Carol McMahon
McMeans	Jeffrey	CA		US	Rick Yard, David Fish, I urge the Bureau of Ocean Energy Management and Bureau of Safety and Environmental Enforcement to ban offshore fracking in our precious ocean -- and, at the very least, honestly complete the environmental review that's required by law. I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Don Meehan
Meek	Laura	CA	95618	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Laura Meek
Meeker	Simone	CA	92342	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. This is way too close to the San Andreas Fault. The damage that would be done if that fault were triggered just in that area would be devastating. But has been so long since the fault has had an earthquake that we don't know if the whole fault will be triggered or not. If so, it will affect people from the Cajon Pass on I-15 clear up to San Francisco and perhaps further. Smaller communities inland from the coast who depend upon coastal traffic for gasoline, groceries and other everyday needs will be left without. I know this because I live on the high desert and we have studied what might happen if LA had an earthquake, and we would be on our own. It's a terrifying thought. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." I vacation at Carpinteria. It's known as the safest beach in America because of the way the tides are protected by the outer reefs. But it won't be safe with the chemicals and oils you will be throwing back into the water. Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Simone Meeker

Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Brunna Mendes
Mendez	Rebecca	CA	95032	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Rebecca Mendez
Mendoza	Miranda	CA	95401	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Valerie Eagle Heart Meyer
Meyer	Robert	CA	95111	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Harry Milkman
Miller	Jennifer	MD	21221	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. Miller	Nancy	AR	93455	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, Do the right thing. Prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Nancy Miller
Miller	Kelly	CA	92128	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. Min	Ray	CA	94131	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Ray Min
Minault	Kent	CA	91423	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. One very significant and potentially destructive outcome is the impact on the food chain for wildlife. Millions of birds have already died because food in the water has moved farther north. Fracking in the ocean waters will add to ocean solution exacerbating the problem. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Don't cave into oil industry pressure. Sincerely, William Mitchel

Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Eileen Mizelle

Mock	Neal	CA	96161	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Neal Mock
Mock	Carol	CA	94536	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Dana Monroe

Mont	Elaine	CA	94901	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Elaine Mont-Eton

Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Lisa Marguerite Mora

Moraes	Simone	ot	N17 6UB	GB	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Simone Moraes
Morales	Rosy	CA	90275	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. Morey	sandra	CA	94602	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. Using fracking on land increasing as an excuse to continue this incredibly dangerous practice of fracking in the ocean is faulty in reasoning as well as in practice. Fracking should be immediately discontinued. It is so dangerous and our coastline is full of earthquake faults. Even as parts of our coastline are falling into the ocean this practice aggravates that process. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Toochis Morin

Morisky	Geri	CA	95437	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Gerald Morris
Morris	Sharon	CA	94541	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I strongly request you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was appropriately disappointed. Fracking is a dangerous and polluting practice that has no place in our ocean. As you know, offshore fracking increases the risk of earthquakes and oil spills. The Refugio spill last year demonstrated how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins died in the spill. The fracking chemicals oil companies would resume dumping into our ocean also pose an additional danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." You are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. Your reasoning additionally demonstrates that fracking is risky no matter where it occurs, including fragile and unpredictable marine environments. Offshore fracking is too big a gamble with our oceanic life-support systems. Please prohibit it now. Sincerely, Sharon Morris
morris	sherri	CA	92311	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Estelle Moulton

When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Joanie Murphy

When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Jessica Nadolski

Neil	Clary	CA	91790	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Clary Neil

Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, nancy neville
Newell	Susan	CA	95404	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Susan Newell

Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Debra Nichols
Nichols	Joshua	CA	93727	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Joshua Nichols

Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, James Noordyk
Nordstrom	Jim	NJ	07307	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely,

Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Kimberly Notary
Notkin	Debbie	CA	94609	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am disturbed and disappointed by your agency's careless and incomplte draft analysis of offshore fracking, As a California resident, I want better research from you, and no fracking on my coastline. Offshore fracking dumps billions of gallons of wastewater containing unidentified and thus unresearchable fracking chemicals into the ocean. Your theory that banning it could lead to more fracking on land is basically "we aren't going to protect our country because someone else might not," and I don't think that's what you want to be saying. Please do the right thing. Sincerely, Debbie Notkin
Novak	Nancy	CA	93727	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. O	Tarin	CA	92263	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Tarin O'Brien
O	Jennifer	CA	94114	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Gregg Oelker
Offill	Jo	CA	93004	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Jo Offill
Ogella	Edith	CA	93111	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, L. Olson
Olson	Jeffery	CA	92084	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Jeffery Olson
Olson	Leah	CA	94117	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Hillary Ostrow
Osz	Erzsebet	CA	91344	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Erzsebet Osz

And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Diane Palacio
Palacky	Tami	VA	22153	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Tami Palacky
Palermino	Ron	CA	92831	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast.
